## **Principle of the BCI filter option**

---

The option BCI filter is available on request and is not subject to the basic digital optical transmission systems DOtech Type K73 and DOtech Type LIN26. The filter system is placed in a separate housing and can be connected to the DOtech Type K73 / DOtech Type LIN26 satellites. This option allows the use of the transmission systems for BCI measurements up to 400 mA according ISO 11452-4.
